

# PhD Open Seminar

Department of Chemistry, IISER Bhopal

**Speaker:** Bapurao Sudam Lad (Thesis Supervisor: Dr.Sreenivas Katukojvala)

Roll No.: 1220208

**Topic of Seminar:** "Divergent Reactivity of Diazoenals in the Construction of N/O-Heterocycles."

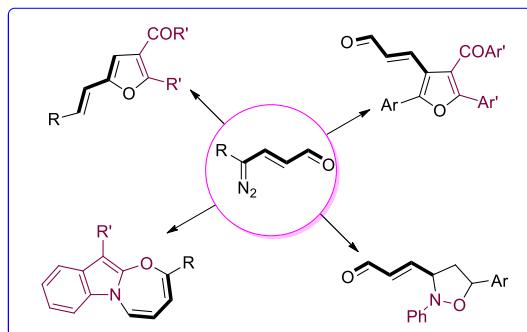

Date: Aug.18, 2017

Time: 10:00 AM

Venue:AB-2(401)

## Abstract

Diazo compounds are versatile building blocks in organic synthesis. In particular, metallocarbenes derived from diazo compounds undergo various reactions including, cyclopropanation, X-H bond insertion, C-H functionalization, ylide rearrangements, and cycloaddition.<sup>1</sup> However, the new discoveries from the metal carbene chemistry are limited by the available classes of diazo compounds. Recently, our group designed a new class of enal functionalized diazo compounds (diazoenals). The Rh-enalcarbenoids derived from diazoenals have been shown to undergo annulation reactions with the electron rich π-bonds such as [4+2]-benzannulation, [4+2]-pyridannulation leading to the valuable indoles, carbazoles and pyridoindoless.<sup>2</sup> Moreover, diazoenals undergo dienamine activation under the combined Rh(II)/Brønsted acid catalysis which were subsequently utilized in the multicomponent synthesis of functionalized pyrroles and 1,4-oxazines via [4+1] and [3+3] annulations respectively.<sup>3</sup> In continuation of our studies on the diazoenals, I would like to present my doctoral research work on the distinct reactivity of diazoenals in the construction of multisubstituted furans,<sup>4</sup> [1,3]oxazepino[3,2-a]indoles,<sup>5</sup> and isoxazolidines.<sup>6</sup>
